

BINWHIP

BIN CLEAN OUT

whip.

Powered by Hydraulics, BinWhip has Exceptional Torque and Control

LESS DOWNTIME, MORE PRODUCTIVITY

When dealing with bulk solids, product flow in the production line can't be ignored. Build-up, ratholing, bridging and plugging too often keep both the product and the profits in the bin. BinWhip is valuable because it eliminates hassle and reduces costs. It takes care of flow problems quickly, minimizes down time, and keeps employees safe and on task. Results are measurable.

HYDRAULIC POWER FOR TORQUE AND CONTROL

The BinWhip is powered by hydraulics, which means there is more power, better control, and less expense. Hydraulic cleaning heads deliver tremendous power, yet are safe, easy to control, and won't damage vessel walls. No external air is needed for operation, so plant air compressors are not tied up when the BinWhip is in use. The Hydraulic Power Unit requires only a 440 Volt 3-phase electrical hook-up to operate.

SAFE, NO BIN ENTRY

The BinWhip works from the top of the vessel, which eliminates the need for dangerous, confined space entry by employees.

EASY TO MOVE, USE

The BinWhip breaks down into easily-handled pieces, so setting up and moving from bin to bin is quick and easy. It works on vessels of all sizes, from a small 4' x 4' ingredients bin to a 30' x 150' coal silo. The BinWhip restores storage vessels to 100% capacity. If the material is currently usable, it can be reclaimed.

BinWhip gets the job done.
